

ABSTRACT OF THE DISCLOSURE

There is provided a system in which transportation, assembly and maintenance can be easily carried out. The system comprises: a case carrying unit for carrying in/out a case accommodating therein the substrate; a liquid-processing unit and the processing liquid being supplied to process the substrate with the processing liquid; a substrate conveying unit for conveying the substrate between the case carrying unit and the liquid-processing unit; a processing liquid storing unit for storing, feeding and recovering the processing liquid which is supplied to the liquid-processing unit; and a plurality of frames each supporting one or more of the case carrying unit, the liquid-processing unit, the substrate conveying unit and the processing liquid storing unit, wherein the at least two of the plurality of frames are capable of being connected to and separated from each other.
